

Hypertext Markup Language

#### WHAT IS HTML?

- HTML is a language for describing web pages.
- HTML stands for Hyper Text Markup Language
- HTML is a markup language
- A markup language is a set of markup tags
- The tags **describe** document content
- HTML documents contain HTML tags and plain text
- HTML documents are also called web pages

#### HTML TAGS

- HTML markup tags are usually called HTML tags
- HTML tags are keywords (tag names) surrounded by angle brackets like <html>
- HTML tags normally come in pairs like <b> and </b>
- The first tag in a pair is the start tag, the second tag is the end tag
- The end tag is written like the start tag, with a forward slash before the tag name
- Start and end tags are also called opening tags and closing tags

#### HTML ELEMENTS

• "HTML tags" and "HTML elements" are often used to describe the same thing.

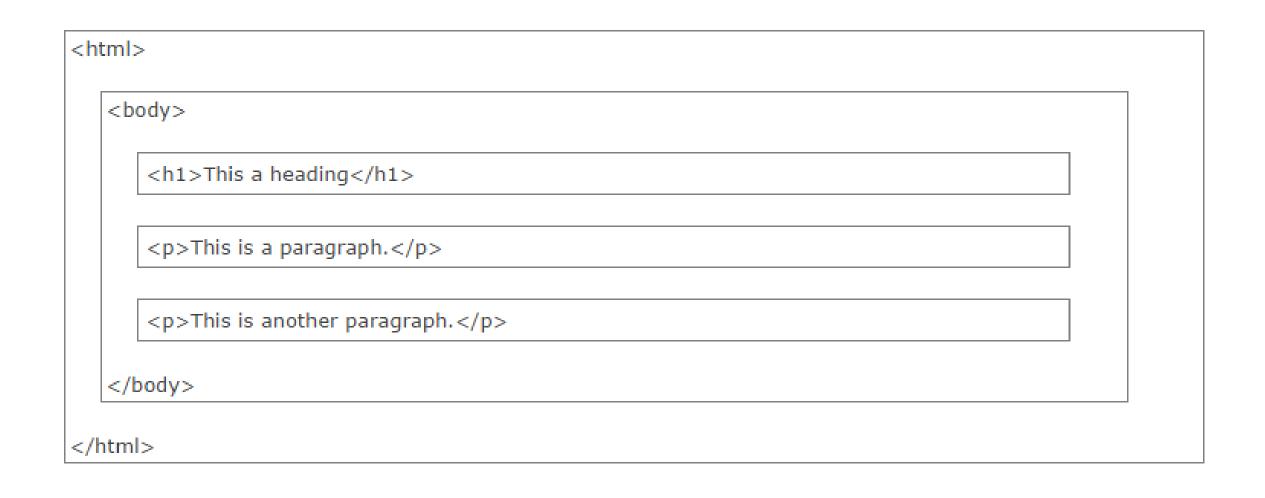

HTML Element:

This is a paragraph.

#### WEB BROWSERS

- The purpose of a web browser (such as Google Chrome, Internet Explorer, Firefox, Safari) is to read HTML documents and display them as web pages.
- The browser does not display the HTML tags, but uses the tags to determine how the content of the HTML page is to be presented/displayed to the user

### HTML PAGE STRUCTURE

# HTML VERSIONS

Version	Year
HTML	1991
HTML+	1993
HTML 2.0	1995
HTML 3.2	1997
HTML 4.01	1999
XHTML 1.0	2000
HTML5	2012
XHTML5	2013

#### HTML EDITORS

- HTML can be edited by using a professional HTML editor like:
- Adobe Dreamweaver
- Microsoft Expression Web
- CoffeeCup HTML Editor
- Notepad ++ / Notepad

#### HTML BASICS

- HTML Headings
- HTML headings are defined with the <h1> to <h6> tags.
- Example

<h1>This is a heading</h1><h2>This is a heading</h2><h3>This is a heading</h3>

#### HTML BASICS

- HTML Paragraphs
- HTML paragraphs are defined with the tag.
- Example
- This is a paragraph.
  This is another paragraph.
- HTML Links
- HTML links are defined with the <a> tag.
- Example
- <a href="http://www.w3schools.com">This is a link</a>

#### HTML BASICS

- HTML Images
- HTML images are defined with the <img> tag.
- Example

<img src="w3schools.jpg" width="104" height="142">

#### HTML ELEMENTS

- HTML documents are defined by HTML elements.
- An HTML element is everything from the start tag to the end tag.
- The start tag is often called the opening tag. The end tag is often called the closing tag
- Example

Start tag *	Element content	End tag *
	This is a paragraph	
<a href="default.htm"></a>	This is a link	

#### HTML DOCUMENT EXAMPLE

```
<!DOCTYPE html>
<html>
<body>
This is my first paragraph.
</body>
</html>
```

#### EMPTY HTML ELEMENTS

- HTML elements with no content are called empty elements.
- <br> is an empty element without a closing tag (the <br>> tag defines a line break).

#### HTML ATTRIBUTES

- Attributes provide additional information about HTML elements.
- HTML elements can have attributes
- Attributes provide additional information about an element
- Attributes are always specified in the start tag
- Attributes come in name/value pairs like: name="value"
- Example

<a href="http://www.mcsoftsis.com">This is a link</a>

#### HTML HEADINGS

- HTML Headings
- Headings are defined with the <h1> to <h6> tags.
- <h1> defines the most important heading. <h6> defines the least important heading.
- Example
- <h1>This is a heading</h1>
- <h2>This is a heading</h2>
- <h3>This is a heading</h3>

#### HTML LINES

- The <hr> tag creates a horizontal line in an HTML page.
- The hr element can be used to separate content:
- Example

```
This is a paragraph.
```

<hr>

This is a paragraph.

<hr>

This is a paragraph.

#### HTML COMMENTS

- Comments can be inserted into the HTML code to make it more readable and understandable. Comments are ignored by the browser and are not displayed.
- Comments are written like this:
- Example

<!-- This is a comment -->

#### HTML PARAGRAPHS

- Paragraphs are defined with the tag.
- Example

This is a paragraph

This is another paragraph

#### HTML LINE BREAKS

- Use the <br/>br> tag if you want a line break (a new line) without starting a new paragraph:
- This is<br/>para<br/>graph with line breaks
- The <br/>br> element is an empty HTML element. It has no end tag.

#### HTML TEXT FORMATTING

• HTML uses tags like <b> and <i> for formatting output, like **bold** or *italic* text.

Tag	Description
<u><b></b></u>	Defines bold text
<u><em></em></u>	Defines emphasized text
<u><i></i></u>	Defines a part of text in an alternate voice or mood
<small></small>	Defines smaller text
<strong></strong>	Defines important text
<sub></sub>	Defines subscripted text
<sup></sup>	Defines superscripted text
<ins></ins>	Defines inserted text
<del></del>	Defines deleted text
<mark></mark>	Defines marked/highlighted text

# HTML HYPERLINKS (LINKS)

- The HTML <a> tag defines a hyperlink.
- A hyperlink (or link) is a word, group of words, or image that you can click on to jump to another document.
- When you move the cursor over a link in a Web page, the arrow will turn into a little hand.
- The most important attribute of the <a> element is the href attribute, which indicates the link's destination.
- By default, links will appear as follows in all browsers:
- An unvisited link is underlined and blue
- A visited link is underlined and purple
- An active link is underlined and red

#### HTML <HEAD>

• The <head> element is a container for all the head elements. Elements inside <head> can include scripts, instruct the browser where to find style sheets, provide meta information, and more.

#### THE HTML <TITLE> ELEMENT

- The <title> tag defines the title of the document.
- The <title> element is required in all HTML/XHTML documents.
- The <title> element:
- defines a title in the browser toolbar
- provides a title for the page when it is added to favorites
- displays a title for the page in search-engine results

#### THE HTML <STYLE> ELEMENT

- The <style> tag is used to define style information for an HTML document.
- Inside the <style> element you specify how HTML elements should render in a browser:

```
<head>
<style type="text/css">
body {background-color:yellow;}
p {color:blue;}
</style>
</head>
```

#### HTML STYLES - CSS

- CSS was introduced together with HTML 4, to provide a better way to style HTML elements.
- CSS can be added to HTML in the following ways:
- 1. Inline using the style attribute in HTML elements
- 2. Internal using the <style> element in the <head> section
- 3. External using an external CSS file

#### HTML IMAGES

- In HTML, images are defined with the <img> tag.
- The <img> tag is empty, which means that it contains attributes only, and has no closing tag.
- To display an image on a page, you need to use the src attribute. Src stands for "source". The value of the src attribute is the URL of the image you want to display.
- Syntax for defining an image:

<img src="url" alt="some\_text">

#### HTML TABLES

- Tables are defined with the tag.
- A table is divided into rows (with the tag), and each row is divided into data cells (with the tag). td stands for "table data," and holds the content of a data cell. A tag can contain text, links, images, lists, forms, other tables, etc.

```
row 1, cell 1
td>row 1, cell 2

row 2, cell 1
row 2, cell 1

row 2, cell 2
```

#### HTML UNORDERED LISTS

- An unordered list starts with the tag. Each list item starts with the tag.
- The list items are marked with bullets (typically small black circles).
- CoffeeMilk
- How the HTML code above looks in a browser:
- Coffee
- Milk

#### HTML ORDERED LISTS

- An ordered list starts with the tag. Each list item starts with the tag.
- The list items are marked with numbers.
- CoffeeMilk
- How the HTML code above looks in a browser:
- 1. Coffee
- 2. Milk

#### HTML FORMS

- HTML forms are used to pass data to a server.
- The <form> tag is used to create an HTML form:
- <form>input elements
  - </form>

# HTML FORMS - THE INPUT ELEMENT

- The most important form element is the <input> element.
- The <input> element is used to select user information.
- An <input> element can vary in many ways, depending on the type attribute. An <input> element can be of type text field, checkbox, password, radio button, submit button, and more.

#### HTML IFRAMES

- An iframe is used to display a web page within a web page.
- Syntax for adding an iframe:

<iframe src="URL"></iframe>

• The URL points to the location of the separate page.

#### HTML COLORS

• HTML colors are defined using a hexadecimal notation (HEX) for the combination of Red, Green, and Blue color values (RGB).

Color Values			
Color	Color HEX	Color RGB	
	#000000	rgb(0,0,0)	
	#FF0000	rgb(255,0,0)	
	#00FF00	rgb(0,255,0)	
	#0000FF	rgb(0,0,255)	
	#FFFF00	rgb(255,255,0)	
	#00FFFF	rgb(0,255,255)	
	#FF00FF	rgb(255,0,255)	
	#C0C0C0	rgb(192,192,192)	
	#FFFFF	rgb(255,255,255)	

#
